help Cheyenne-based Green House Data start up*

LARAMIE, WYO. (February 25, 2009)—Wyoming Angels announced today that Cheyenne-based Green House Data Center Inc. has received the first investment made by the fledgling angel investor group. Green House Data Inc. provides colocation and managed hosting data services for companies like the National Outdoor Leadership School, Awhere and IDES at its 100% wind powered and truly green data center.

“Green House Data is uniquely positioned to take full advantage of the current data center industry supply and demand imbalance that is allowing many facilities to sit well above at 85% occupied,” said lead investor Michael Kmetz, of Wyoming Angels as well as president & CEO of IDES Inc. of Laramie. “It is really exciting to be a part of something so unique with such a tremendous upside potential. As one of the few truly green data centers in the country, the company has attracted national and international attention.”

“We were really pleased to get early support for our business model from the Wyoming Angel Network,” said Shawn Mills, president and CEO of Green House Data Inc. “Having this group of investors and successful entrepreneurs as part of our syndicated investment round has brought a wealth of strategic guidance, customer introductions and unique insight to our business.”

As part of the investment, Green House Data has promised to return annually to update the angel group on the company’s progress and prospects.

ABOUT WYOMING ANGELS

Wyoming Angels is a new, state-wide loose-knit investor group started in 2007 by Venture West Network Inc. and supported by Laramie Economic Development Corp. The group holds quarterly meetings to evaluate new investment opportunities and regularly seeks new, active members. More information is available on the web at www.wyomingangels.angelgroups.net.

ABOUT GREEN HOUSE DATA INC.

Green House Data is one of the nation’s only high-density data center and hosted computing facilities that is entirely powered through renewable wind energy. The company’s green data center offers the region’s lowest cost, high-availability co-location and managed hosting services. The company’s green operations deliver a zero carbon footprint computer facility that is approximately ten percent less expensive than its competitors.
