PRODUCER OF HIGH-PERFORMANCE COMPONENTS FOR LITHIUM BATTERIES RECEIVES INVESTMENT FROM NEW WYOMING INVESTOR CLUB

Wyoming Angels help accelerate commercialization of next-generation rechargeable batteries

LARAMIE, WYO. - Wyoming Angels announced today that Porous Power Technologies, LLC has received the latest investment made by the recently formed Wyoming angel investor group.

"We are pleased to receive this investment from the Wyoming angel community," said Tim Feaver, CEO of Porous Power. "It will assist our company in moving toward full commercialization more quickly."

Porous Power's *Symmetrix™* battery electrode separator membrane, named by Frost and Sullivan the "Advanced Energy Storage Technology Innovation of the Year," can dramatically improve the performance and reliability of large, flat cells for Electric and Hybrid Electric Vehicles (EVs and HEVs).

"Porous Power is uniquely positioned to take full advantage of the exponentially growing demand for stable and safe battery technology," said Wyoming Angels chairman Michael Kmetz. "As a Wyoming-based investor, we are excited to be able to participate in something that is so unique and has such tremendous upside potential. PPT is one of the few battery technology companies in the country this well positioned, which explains why it has attracted national and international attention."

Through its connections to a national network of angel investor clubs, Wyoming Angels provides access to private investment opportunities in leading new ventures from around the country, as well as opportunity to mentor and invest in startup and growth companies based in Wyoming.

ABOUT WYOMING ANGELS

Wyoming Angels is a new, statewide loose-knit investor group started in 2007 by Venture West Network Inc. and supported by Laramie Economic Development Corp. The group holds quarterly meetings to evaluate new investment opportunities and regularly seeks new, active members. More information is available on the web at www.wyomingangels.angelgroups.net.

ABOUT POROUS POWER TECHNOLOGIES, LLC

Porous Power Technologies, of Lafayette, CO, produces and sells high-performance polymer membranes internationally to lithium-ion battery producers. They also operate a battery development/test facility in Plymouth Meeting, PA to support developers of the large laminated lithium-ion cells that are becoming the industry standard for hybrid electric and electric vehicles and advanced utility back-up systems. Products enable lithium-ion cells to charge up to 50% faster, deliver up to 4X more energy under load and last through twice as many charge/discharge cycles. PPT has filed at least thirteen patent applications for unique products and processes. For more information visit: www.porouspower.com.
